

Slide 1: Insert Memberships

This slide demonstrates the successful insertion of two distinct membership plans into the Memberships table. The Basic and Premium tiers are recorded with their respective fees and benefits, providing the foundation for associating members with different access levels.

Slide 2: Insert Members

This slide illustrates the addition of two new members to the Members table. The query stores relevant user information, including membership type, start and end dates, and contact details. These entries are essential for tracking bookings and payments later in the system.

Slide 3: Insert Trainers

Trainers are added to the system in this slide using auto-incremented IDs. Each trainer is associated with their name, specialisation, availability, and contact info. This step is necessary for linking trainers to scheduled classes.

Slide 4: Insert Classes

This query adds two fitness classes into the Classes table, including class names, descriptions, durations, and maximum capacity. These will be referenced when scheduling classes for members to attend.

Slide 5: Insert Class Schedule

In this step, specific classes are scheduled by assigning trainers, dates, and start times. The ClassSchedule table acts as a link between trainers and classes, forming the schedule that members will book into.

Slide 6: Insert Bookings

This slide illustrates how members book into scheduled classes. Each booking is associated with a member and a specific scheduled class. The Attendance field indicates whether the member attended or missed the session, making it useful for engagement tracking.

Slide 7: Insert Payments

The **Payments** table records each member's payment, including amount, date, method, and status. This table helps monitor both completed and pending payments, ensuring accountability and financial tracking.

Slide 8: Booking Summary Query

This query performs a multi-table join across **Members**, **Bookings**, **ClassSchedule**, **Classes**, and **Trainers** to display a full overview of each member's booking. It includes the trainer's name, class details, attendance, and timing.

Slide 9: Payment Report Query

This report links the **Payments** and **Members** tables to display a complete list of all payments made, including the member's name, payment date, amount, and status. It is useful for verifying outstanding dues and summarising revenue.

Slide 10: Trainer Schedule Report

This slide presents a JOIN query that shows each trainer's scheduled classes along with dates and times. It's ordered chronologically to provide a clear and organised timetable for trainers and administrative planning.
